simple. An image is comprised of pixels, a collection of little squares that make up the visible portions of the image. These pixels represent color variations (transparent, white, black), edges, and details that the eye perceives. In Photoshop, you can change or remove details, reshape borders, change colors (or leave them as they are), and even add or delete layers that you can manipulate individually.

To edit an image in Photoshop Elements, you would open it in Photoshop, crop it, create a new document in a new file in Elements, use Elements' tools to resize the image, and then save it. To create an image in Photoshop Elements, you open up a new file in Photoshop, resize it and save it. Since most people only edit images, not create them, I focused on editing images with Photoshop Elements in this tutorial.

You must have a basic understanding of how to use Photoshop or the image editing program of your choice in order to successfully complete this tutorial. It may be possible to set up your own website so that it has an image with a link directing users to your website. However, it's more likely that you'd simply use your own Twitter or Facebook account as a link on your website. This method ensures that you're protected from loss of your website due to unexpected browser upgrades or errors in browsers, and from loss of your website to hackers or elements for the

same reasons. This is likely not the only type of website you want to create. For example, you may wish to create a website with many images and/or short videos of yourself for sale. Check out my Guide to the Magento Video Portal (High-Quality Video Video Editor (Magento Extension)) to learn more about these types of projects. If you have strong hosting or software skills, you can host your own website with the right software. For the purpose of this tutorial, we'll just work with a free web hosting plan such as GoDaddy.

Setting Up Your Domain (This is a necessary part of the project. Please read the entire tutorial before proceeding.)

You need to create a separate website for this tutorial's website. Just like your regular website, it will store your custom content such as images, videos, or flash video (if you choose to create videos). This new site will also have a custom web address. Go to [to create a free website with a custom domain name](#). If you'd like, you can get your own custom domain name from GoDaddy for about \$6 a year. You can use this website to test your site before you decide to pay GoDaddy to host it. Downloading the Desktop App

Most commonly used on photos, the Healing Brush will often increase the size of the photo or remove a blemish, reducing the amount of time you need to spend retouching your photo. When you use the Stamp Tool, you can create simple shapes like circles, squares, or ovals. A popular use of the Stamp Tool is to cover up mistakes. For instance, you can use it to cover up missed details of your photo. Crop lets you change the size of the photo. To reduce your image, you'll need to use the Crop Tool. Crop can also be used to copy whole areas of the photo. Use the Smudge Tool for adding texture to an image. It can change the density, opacity, and hue of the pixels in the selected area. When you're done, you can retouch the photo as you see fit. Many people use the Brush Tool to paint on photos, using a variety of colors. To create a new layer, choose Select > All, or press Command/Ctrl + A to select the entire image. Then choose Edit > Copy to create a duplicate of the entire layer. Now that you've copied the entire layer, you can edit it as

you please, and you don't need to worry about accidentally erasing other pixels with your brush. The Shadow and Highlight tools are often used for painting and retouching photographs. Shadows are added to the areas of the photo that you want to lighten. By using Highlight, you can darken sections that you want to lighten. When you're done, you can remove either the Shadow or Highlight Tool (press Command/Ctrl + Option/Alt + D) for a particular layer. The Magic Eraser removes small parts of the image, if you're trying to make a photo more appealing. For instance, if you are adding text to a photo, the Magic Eraser will allow you to remove text that is too large, as it's too hard to put it back in after editing. The Eraser Tool can be used in a similar way to the Magic Eraser, but the Eraser Tool will not affect text. In addition to being used for repairing photos, it's also used to remove the objects in the photo. It's a great tool to remove unwanted objects that you don't want in the photo.
