The post office is Yahya, Union Council Yasin Sharif In Hindipdf,. There are two : Yasin Sharif In HindipdfQ: What is the fastest way to get a list of files and subdirectories that match a pattern? I am using for root, dirs, files in os.walk("/some/path/files/"): to get a list of files that are in subdirectories. Now, I want to do something like this root_dirs_files = [file for file in dirs if any(x in file for x in find_relevant_type_patterns)] to get a list of the subdirectories with subdirectories and files and so on recursively. Is there a simple and compact way of writing this, using the native os module? A: Use

the same algorithm that is used by glob.glob(): import glob p = glob.glob("/some/path/files/") This returns a list of matching files and directories. A more detailed tutorial is given here. 0cc13bf012

Laravel 5.3 I'm validating a request to login. If validation is success I want to store some values (as session or cache) which is use for authenticated actions. Here is my controller method which I'm using for validating the login request. public function login() { $input = Input::all(); $rules = array('email'=>'required|email', 'password'=>'required'); $validation = Validator::make($input,$rules); if($validation->fails()) { return Redirect::to('/login'); } else { // login for success } } what should I do for store values which I want to use as authenticated values. A: You need to use Auth to store something in session and do something else depending on logged in/out status. Something like this maybe: Route::get('/test', function () { if (Auth::check()) { // Logged in so do something that's authenticated } else { // Logged out so something that
