This is great, because it means you can still create the same layout you'd traditionally create using Photoshop, but now you can just open it up in the PSDxD format without having to open.psd files in Photoshop. PsDxD users can even use the free version of PSE, instead of just PSE Elements, which is definitely a very good deal. Beyond that, consider Adobe Dynamic Link which turns any image into an URL, or even drives a Creative Cloud website right from a PSD (go to the "Learn More" page on the page to do so), and I suspect that many are going to find it useful. This is especially true for those who work a lot in DWG, AutoCAD, and related formats. If you're working on a web project or serious social media presence, it's important to get those images you create for things like blog posts, website themes, or banner design. Photoshop will let you use your PSD or PSE image as a live, responsive CSS background. Import it from the Files app or even from the Photoshop app. It even lets you use your own editing tools, rather than just the ones in the browser. Even the new features and innovations don't stop there. You can even go a step further with Photoshop and create a web app with your own custom design, rather than just let the app do it for you.
