The entry-level graphics card will serve you well if all you do is edit photos and browse the internet. They definitely have excessive gaming features that can be a bit overwhelming for beginners, but will be ideal for a casual edit or comparing photos to each other. The downside to using an entry-level graphics card is the frequent lack of reliable support. They aren't usually built to withstand large amounts of usage and are not really designed for creative professionals. Because of this they can become unreliable after a few years of usage. When you buy your graphics card, make sure it is a reputable brand and that you buy it through a reputable retailer, such as Newegg.com.
