Software. Scientific WorkPlace 6.0 serial: Prograf working with Sysacin / Mackichan / PC. Substantial effort and attention continues toward the development of newer and more sustainable energy supplies. The conservation of energy by increased energy efficiency remains crucial to the world's energy future. According to an October 2010 report from the U.S. Department of Energy, heating and cooling account for 56% of the energy use in the average U.S. home, making it the largest energy expense for most homes. Along with improvements in the physical plant associated with home heating and cooling (e.g., improved insulation, higher efficiency furnaces), substantial increases in energy efficiency can be achieved by better control and regulation of home heating and cooling equipment. As mentioned, heating, ventilating, and air conditioning (HVAC) equipment represents a large portion of the energy use in a typical home. Such equipment is of course suitable to vary the temperature of a typical home. For example, considering HVAC equipment
