Comparison with Default Airport in FSX

The default airport in FSX is a basic and generic representation of Boston Logan International Airport, based on the 2006 version of the airport. It covers a smaller area and includes only some of the terminals, runways, taxiways, aprons, buildings, and landmarks. It also lacks:

- Custom animated jetways that connect to your aircraft when you park at the gate.
- Taxiway lighting that illuminates the ground and guides you to your destination.
- Terraformed terrain and 3D rocks that create a realistic and varied landscape around the airport.
- Hand crafted ground textures that show the wear and tear of the pavement and the markings of the airport.
- Animated passengers that walk around the terminal and board or disembark from your aircraft.

All these features are missing or outdated in the default airport in FSX, which makes it less visually appealing and realistic. It also affects the performance and compatibility of the airport with FSX and other addons. Therefore, FlyTampa KBOS - FSX is a significant improvement over the default airport in FSX, as it offers more features, details, accuracy, realism, immersion, performance, and compatibility. It is a must-have addon for anyone who wants to fly in or out of Boston Logan International Airport in FSX.
