I have been searching and trying all kinds of foot cream! I came across this one after searching for the best foot cream on the market. Along with using a pedi-egg and this cream! Wow! I still use the pedi-egg but not as much. I highly recommend this product... It is absolutely fabulous!! Another culprit behind crustiness and thick calluses is some of us don't shed keratin as quickly as others. If you suspect you may be one of these people, "use a heel file in the shower to slough away dead skin and soften calluses [before reaching for foot cream]," advises New York City-based nail artist Rita Remark. Exfoliating first with a pumice stone and following up with a moisturizer is the best way to ensure the hydration needed to keep your feet soft isn't blocked. For when you want to keep the whole "having thick skin" thing strictly proverbial, New York City-based podiatrist Emily Splichal, DPM, loves CeraVe's SA Cream for Rough & Bumpy Skin, which she notes is great for busting through calluses and tough skin. "This was voted one of the best foot creams by my patients," she adds. "[They often] prefer it over most prescription foot creams." The skin-softening properties in this formula are all thanks to moisture-sealing ceramides, hydrating hyaluronic acid, and exfoliating salicylic acid.
